1. Executive Summary

This Financial Condition Report ("FCR") sets out the results of the analysis of the financial condition of Mutual Benefits Life Assurance Limited ("Mutual Benefits" or "the Company") as at 31 December 2021. Where available, this report includes an analysis of the financial progress since the previous financial year end. The Company has contracted Zamara Consulting Actuaries Nigeria Limited Limited to provide actuarial services. In terms of this arrangement, Nikhil Dodhia, is the appointed actuary.

The FCR is limited to the Mutual Benefits Life Assurance Limited information not the consolidated Mutual Benefits information.

1.1. Financial Performance

The table below summarises the profitability of Mutual Benefits as at 31 December 2021 alongside that as at 31 December 2020 Key financial ratios have also been included that can be used to assess the trends in the business.

	31-Dec-21	31-Dec-20
REVENUE ACCOUNT	000' 4	000' //
Gross premium written	11,617,005	8,433,063
Gross premium income	10,079,103	8,525,403
Premium ceded to reinsurers	(703,624)	(947,345)
Net premium income	9,375,479	7,578,058
Fees and commissions	68,683	179,529
Net underwriting incomes	9,444,162	7,757,587
Net benefits and claims	4,751,142	3,577,780
Changes in individual life fund	850,885	192,942
Changes in annuity reserve	46,196	3,997
Underwriting expenses	2,420,132	2,191,949
Net underwriting expenses	8,068,355	5,966,668
Underwriting profit	1,375,807	1,790,919
Profit on investment contracts	397,679	416,303
Investment incomes	518,249	1,283,257
Net fair value gains/(loss) on assets at FVTPL	(4,132,749)	2,165,343
Other income	17,736	62,031
Impairment loss on financial assets	310,124	(896,583)
Employee benefit expenses	(626,654)	(626,356)
Other management expenses	(1,033,019)	(1,057,029)
Result in operating activities	(3,172,827)	3,137,885
Finance costs	-	-
Finance income	-	-
Profit before income tax	(3,172,827)	3,137,885
Income tax(expense)/benefit	(37,594)	246,931
Profit from continuing operation	(3,210,421)	3,384,816
Net profit	(3,210,421)	3,384,816

Ratios

Net Claims Ratio (Including Change in the life fund)	60.2%	49.8%
Underwriting Expense Ratio	25.8%	28.9%
Net Combined Ratio	86.1%	78,7%

From the above, there has been a decline in profit from lambda 3.4 billion in 2020 to a loss of lambda 3.2 billion in 2021 which represents a lambda 6.6 billion decline. The observed loss is attributed to a loss in fair value of financial assets in the current year 2021.

The gross written premium increased by 37.8% over the year, from \$8.4 billion in 2020 to \$11.6 billion in 2021 which may be attributed to the increase in the Group Life business.

Net benefits and claims increased from \$3.6 billion in 2020 to \$4.8 billion in 2021 representing an increase of 33% caused by an increase in claims paid.

The underwriting expense ratio decreased slightly by 3.1% from 28.9% in 2020 to 25.8% in 2021. While this is commendable, the expense ratio is still considerably high as the ideal ratio should be in the range of 10% -20%. Management should tighten expense controls by implementing effective cost cutting measures to reduce the expense ratio to appropriate levels.

Investment income decreased from \$7.1 billion in 2020 to a loss of \$407 million in 2021 majorly due to fair value losses in 2021. The table below provides a breakdown of the investment income over the past 2 years:

Investment income N '000	2021	2020
Income from investment Contracts	3,207,573	3,624,605
Investment income	518,249	1,283,257
Fair value gains/ (losses)	(4,132,749)	2,165,343
Total Investment income	(406,927)	7,073,205

1.1.1. Net Assets

The following table summarises the Net Assets of the Company:

	31 December		31 December	
Asset Class N '000	2021	%	2020	%
Fixed interest	36,286,595	67%	38,764,868	74%
Property	6,035,000	11%	6,665,000	13%
Equity	413,393	1%	139,117	0%
Cash deposits	6,923,714	13%	2,880,279	5%
Statutory Deposit	200,000	0%	200,000	0%
Invested assets	49,858,702	92%	48,649,264	92%
Reinsurance recoveries	1,426,918	3%	1,702,233	3%
Other balance sheet assets	2,772,076	5%	2,131,140	4%
Total Assets	54,057,696	100%	52,482,637	100%
Insurance and Investment				
Liabilities	(41,900,805)		(37,319,223)	
Current Liabilities	(1,930,005)		(2,000,384)	
Net Assets	10,226,886		13,163,030	

Net Assets reduced from \$13,2billion in 2020 to \$10.2billion in 2021 representing a 22% decrease. This was mainly due to an increase in insurance contracts liabilities.

1.2. Material risks identified

The following section summarises the key risks faced by Mutual Benefits, as well as their impact and implications, based on our reviews as the Appointed Actuary:

1.2.1 Insurance Risk

Mutual Benefits is exposed to the following elements of insurance risk, with varying levels of exposure.

- Mortality Risk The Company is exposed to the risk of actual mortality rates being higher than the assumed rates in the pricing of products. This would represent higher death payouts than expected.
- Longevity Risk The Company has an annuity book that is exposed to the risk of the annuitants living longer than expected as per the pricing basis of the annuities, representing higher pay-outs than expected.
- Expense Risk The Company is exposed to the risk of the actual expenses incurred exceeding the assumed expenses in the valuation of the liabilities. This is especially crucial given that the expense (including commissions) ratio as at 31 December 2021 was 26.5%. The assumed renewal expenses per policy basis for next year might increase the actuarial liabilities due to future expenses incurred.

1.2.2 <u>Investment Risk</u>

The Company's product offering includes policies with significant guaranteed rates of return. This exposes the Company to the risk that the actual investment return achieved is insufficient to meet guaranteed interest rates – Investment returns risk.

1.2.3 Reinsurance Optimisation

Our high-level analysis of the reinsurance strategy in place revealed that the overall reinsurance arrangements may not be optimal due to the reinsurance net loss ratios being higher than the gross loss ratios.

1.3. Recommendations

1.3.1 Insurance Risk

We recommend that the Company undertakes experience analysis investigations in order to assess the appropriateness of the valuation assumptions adopted and hence the sufficiency of the reserves held. Experience should be continuously monitored to effectively manage insurance and investment risks.

Management should continue to monitor the claims volatility and deteriorations in their business to minimise the probability of one-off losses wiping out the company's profits. This should be done by ensuring that the company is adequately protected by its reinsurance arrangements. Management

may also consider introducing a catastrophe reserve and/or claims equalisation reserve to combat the risk.

It is worth noting that proper data management is key in facilitating the investigations mentioned above. The company should aim at collecting and maintaining accurate data records. In growing the ordinary individual life business, it is important that policyholder movements can be reconciled from year to year to properly assess the profitability of new business.

1.3.2 Investment Risk

Management should consider setting up bonus stabilisation and cost of guarantee reserves in order to manage investment risk. A bonus stabilisation reserve will allow the company to smooth bonuses (interest additions) declared over time and manage policy holder expectations. An asset liability matching exercise should also be undertaken in order to reduce investment risks associated with mismatching assets and liabilities.

1.3.3 Reinsurance Optimisation

We recommend that the company conducts a reinsurance optimisation exercise so that they can benefit fully from their reinsurance arrangements.

1.4. Status of Prior Year Recommendations

The following is a summary of the status of the key recommendations made in the 2020 FCR:

Recommendation	Status	Comment
Conducting Experience Analyses		This continues to be a point of focus for the company, as experience investigation analyses are yet to be conducted
Setting up an investment guarantee reserve		The Company is yet to set up an investment management guarantee reserve.

Colour	Status	Meaning	
Red		Needs immediate action.	
Amber	Continues to be an area of focus.		
Green		No longer a point of focus.	

1.5. Conclusion

I, Nikhil Dodhia, acting in my capacity as the Appointed Actuary, certify that, as at 31 December 2021, this Financial Condition Report for Mutual Benefits Life Assurance Limited has been prepared in accordance with the guidelines issued by the National Insurance Commission ("NAICOM") and generally acceptable actuarial principles.

Nikhil Dodhia Mutual Benefits Life Assurance Limited Appointed Actuary

-Mullulden

FRC No: FRC/2021/004/00000024023

2. Information Requirements

2.1 Data Obtained

The following data was received from Mutual Benefits in order to complete the FCR:

- Audited financial statements as at 31 December 2021 for the 2021 financial year.
- Audited financial statements as at 31 December 2020 for the 2020 financial year.
- Actuarial valuation of the Life Fund report as at 31 December 2021 prepared by Zamara.
- Mutual Benefits Financial Condition report as at 31 December 2020 prepared by Zamara
- Various documents relating to company governance structure and business plans for Mutual Benefits, including:
 - Mutual Benefits Life Assurance Limited Reassurance Management Strategy
 - Mutual Benefits Investment Strategy (2020)
 - o Mutual Benefits Enterprise Risk Management (ERM) Framework
 - Mutual Benefits Shareholder Summary and Company Organogram

It was assumed that the data provided by the Company was correct, and a full audit of the data provided was not conducted.

2.2 Reliance and Limitations

This FCR is based on the life revenue accounts of the Company as at 31 December 2021, audited financial statements of the Company as at 31 December 2021, as well as the business plans and company information that were provided to Zamara.

Zamara also conducted the Actuarial Valuation of the Life Fund as at 31 December 2021, the results of which are summarised in section 4 of this report.

- Mutual School Fees Guarantee Scheme

Individual Investment Products

- Children Education Plan
- Individual Savings and Protection Plan
- Micro-Pension and Investment Plan
- Mutual Benefit Life Investment Plan
- Mutual Micro- Pension Plan
- Mutual Dignity Plan
- Mutual Education Guarantee Plan
- Personal Pension and Investment Plan

Annuities

- Immediate Annuities
- Deferred Annuities

3.3. Recent Experience and Profitability

3.3.1. Revenue Accounts

The table below details the profitability of Mutual Benefits, as well as a comparison of Actual performance for the financial year ended 31 December 2021. Key financial ratios have also been included that can be used to assess any trends in the business.

	31-Dec-21	31-Dec-20
REVENUE ACCOUNT	000' #	000' 4
Gross premium written	11,617,005	8,433,063
Gross premium income	10,079,103	8,525,403
Premium ceded to reinsurers	(703,624)	(947,345)
Net premium income	9,375,479	7,578,058
Fees and commissions	68,683	179,529
Net underwriting incomes	9,444,162	7,757,587
Net benefits and claims	4,751,142	3,577,780
Changes in individual life fund	850,885	192,942
Changes in annuity reserve	46,196	3,997
Underwriting expenses	2,420,132	2,191,949
Net underwriting expenses	8,068,355	5,966,668
Underwriting profit	1,375,807	1,790,919
Profit on investment contracts	397,679	416,303
Investment incomes	518,249	1,283,257
Net fair value gain/(loss) on assets at FVTPL	(4,132,749)	2,165,343
Other income	17,736	62,031
Impairment loss on financial assets	310,124	(896,583)
Employee benefit expenses	(626,654)	(626,356)
Other management expenses	(1,033,019)	(1,057,029)
Result in operating activities	(3,172,827)	3,137,885
Finance costs	-	-
Finance income	-	-
Profit before income tax	(3,172,827)	3,137,885
Income tax(expense)/benefit	(37,594)	246,931
Profit from continuing operation	(3,210,421)	3,384,816
Net profit	(3,210,421)	3,384,816

Ratios

Net Claims Ratio (Including Change in the life fund)	60.2%	49.8%
Underwriting Expense Ratio	25.8%	28.9%
Net Combined Ratio	86.1%	78,7%

From the above, there has been a decline in profit from lambda 3.4 billion in 2020 to a loss of lambda 3.2 billion in 2021 which represents a lambda 6.6 billion decline. The observed loss is attributed to a loss in fair value of financial assets in the current year 2021.

The gross written premium increased by 37.8% over the year, from \$8.4 billion in 2020 to \$11.6 billion in 2021 which may be attributed to the increase in the Group Life business.

Net benefits and claims increased from $\frac{1}{4}$ 3.6 billion in 2020 to $\frac{1}{4}$ 4.8 billion in 2021 representing an increase of 33% caused by an increase in claims paid.

The underwriting expense ratio decreased slightly by 3.1% from 28.9% in 2020 to 25.8% in 2021. While this is commendable, the expense ratio is still considerably high as the ideal ratio should be in the range of 10% -20%. Management should tighten expense controls by implementing effective cost cutting measures to reduce the expense ratio to appropriate levels.

Investment income decreased from a return of N7.1 billion in 2020 to an investment loss of N406.9 million in 2021.

Investment income N '000	2021	2020
Income from investment Contracts	3,207,573	3,624,605
Investment income	518,249	1,283,257
Fair value gains	(4,132,749)	2,165,343
Total Investment income	(406,927)	7,073,205

3.3.2. Net Assets

The following table summarises the Net Assets of the Company:

	31 December		31 December	
Asset Class N '000	2021	%	2020	%
Fixed interest	36,286,595	67%	38,764,868	74%
Property	6,035,000	11%	6,665,000	13%
Equity	413,393	1%	139,117	0%
Cash deposits	6,923,714	13%	2,880,279	5%
Statutory Deposit	200,000	0%	200,000	0%
Invested assets	49,858,702	92%	48,649,264	92%
Reinsurance recoveries	1,426,918	3%	1,702,233	3%
Other balance sheet assets	2,772,076	5%	2,131,140	4%
Total Assets	54,057,696	100%	52,482,637	100%
Insurance and Investment Liabilities	(41,900,805)		(37,319,223)	
Current Liabilities	(1,930,005)		(2,000,384)	
Net Assets	10,226,886		13,163,030	

Net Assets reduced from ₩13,2billion in 2020 to ₩10.2billion in 2021 representing a 22% decrease.

3.4. Deviations from budgeted plans

The table below identifies deviations in the financial performance of Mutual Benefits for the financial year ended 31 December 2021 relative to the budget for the same period.

Income Statement	2021 Actual	2021 Budget	Difference	Difference
	900° N	9000 M	N '000	%
Gross premium written	11,617,005	11,591,573	(25,432)	0%
Gross premium income	10,079,103	9,852,837	(226,266)	2%
Premium ceded to reinsurers	(703,624)	(860,447)	(156,823)	-18%
Net premium income	9,375,479	8,992,390	(383,089)	4%
Fees and commissions	68,683	171,102	102,419	-60%
Net underwriting incomes	9,444,162	9,163,491	(280,671)	3%
Net benefits and claims	5,648,223	4,217,431	(1,430,792)	34%
Underwriting expenses	2,420,132	2,393,210	(26,922)	1%
Net underwriting expenses	8,068,355	6,610,641	(1,457,714)	22%
Underwriting profit	1,375,807	2,552,851	1,177,044	-46%
Profit on investment contracts	397,679	885,532	487,853	-55%
Investment incomes	518,249	2,154,611	1,636,362	-76%
Net fair value loss on assets at FVTPL	(4,132,749)	-	4,132,749	0%
Other income	17,736	-	(17,736)	0%
Impairment loss on financial assets	310,124	-	(310,124)	0%
Employee benefit expenses	(626,654)	(1,424,641)	(797,987)	-56%
Other management expenses	(1,033,019)	(976,117)	56,902	6%
Result in operating activities	(3,172,827)	3,192,236	2,479,772	-199%
Ratios				
Net Claims Ratio	60.2%	46.9%		
Underwriting Expense Ratio	25.8%	26.6%		
Net Combined Ratio	86.1%	73.5%		

The actual financial performance in 2021 overall declined greatly from the expected performance as per the 2021 budget projections as shown by the result in operating activities. We attribute this to the loss arising after fair value adjustments.

3.5. Business plans

Mutual Benefits has developed a 4-year business plan from 2021. We have outlined below the main points of the second year of the budget:

	2021	2022		
Income Statement	Actual	Budgeted	Difference	Difference
	N'000	N '000	N,000	%
Gross premium written	11,617,005	14,103,948	2,486,943	21%
Gross premium income	10,079,103	11,988,355	1,909,252	19%
Premium ceded to reinsurers	(703,624)	(1,046,942)	(343,318)	49%
Net premium income	9,375,479	10,941,414	1,565,935	17%
Fees and commissions	68,683	208,186	139,503	203%
Net underwriting incomes	9,444,162	11,149,600	1,705,438	18%
Net benefits and claims	5,648,223	5,131,523	(516,700)	-9%
Underwriting expenses	2,420,132	2,911,918	491,786	20%
Net underwriting expenses	8,068,355	8,043,441	(24,914)	0%
Underwriting profit	1,375,807	3,106,159	1,730,352	126%
Profit on investment contracts	397,679	980,400	582,721	147%
Investment incomes	518,249	2,259,342	1,741,093	336%
Net fair value gain on assets at FVTPL	(4,132,749)	-	4,132,749	-100%
Other income	17,736	_	(17,736)	-100%
Impairment loss on financial assets	310,124	-	(310,124)	-100%
Employee benefit expenses	(626,654)	(1,187,682)	(561,028)	90%
Other management expenses	(1,033,019)	(1,762,581)	(729,562)	71%
Result in operating activities	(3,172,827)	3,395,638	6,568,465	-207%
Ratios				
Net Claims Ratio	60.2%	46.9%		
Underwriting Expense Ratio	25.8%	26.6%		
Net Combined Ratio	86.1%	73.5%		

From the above projections, the top line is expected to grow by 21% from 2021 which implies a growth of \aleph 2.5 billion in written premiums corresponding to an increase of 19% in gross premium income. The expected growth in written premiums is to be supported by implementing the following action points of the business strategy in place:

- Establishing the brand of Mutual Benefits as the most customer focused insurance Company by establishing a platform of getting customer feedback and optimising key customer facing processes.
- Aggressive expansion of the customer base particularly in the retail segment by using alternative distribution channels.
- Recruitment, training, and retention of over 10,000 marketing agents

The proposed business growth strategy is reasonable given the Company's recent performance.

The projected claims ratio of 47% is reasonable. However, the realisation of this will also be dependent on adequate pricing regarding making sufficient allowance for expenses.

Overall, Mutual Benefits is expected to remain profitable, but management should continue focussing on controlling claims and management costs while monitoring its top-line and working on improving investment returns.

4. Financial Position and Solvency Management

Zamara conducted an actuarial valuation of the Life fund of Mutual Benefits as at 31 December 2020, and this section includes a summary of the analysis.

4.1. Results of the Actuarial Valuation

The tables below shows the results of the actuarial valuation of the Company's Life Fund as at 31 December 2021. The results of the valuation as at 31 December 2020 have also been provided for comparative purposes:

Published assets	31-Dec-21	31-Dec-20
Total assets from balance sheet	54,057,696	52,482,638
Less: Gross policyholder liabilities	41,900,805	37,319,223
Less: Current liabilities	1,930,005	2,000,384
Excess of assets over liabilities	10,226,886	13,163,030
Represented By		
Share Capital	8,002,500	8,002,500
Share Premium	-	
Contingency Reserve	1,170,181	1,054,010
Fair value losses	(403,079)	(677,355)
Retained Income	1,457,284	4,783,876
Total	10,226,886	13,163,031

Actuarial liabilities for each class of business summarized in the table below;

Published assets	2021 Reserves N '000	2020 Reserves N '000
Insurance contract		
Individual Life	1,933,254	1,082,368
Annuities	374,893	328,697
Group Life	13,523,083	7,460,891
Investment Contract		
Individual investment contracts	29,335,421	27,864,056
Deposit Administration contracts	843,195	583,211
Total	46,009,846	37,319,223

There was a significant increase of actuarial reserves in respect to individual life assurances in 2021 of \text{\text{\text{M}}}851 million. The overall increase in reserves was mainly attributed to changes in the actuarial valuation of the group life contracts. Annuity reserves increased even as the valuation interest rate reduced.

The observed increase in Group Life reserves is attributed to the growth in the volume of business.

An increase in the reserves of investment contracts follows from interest additions and deposits made over the year.

4.2. Adequacy of past estimates of insurance liabilities

The bulk of Mutual Benefits reserves comprise of investment contracts which make up 66% of the total reserves. Reserves held as at 31 December 2021 constituted policyholder contributions and interest earned to the date of the valuation which represent the full amount owed by the Company in respect to policy holder liabilities. The reserves were therefore sufficient. It was however recommended that the Company establishes an investment reserve in order to manage the investment risk associated with guaranteed interest rates.

For long term assurance contracts which make up 4.2% of the total liabilities, the adequacy of GPV reserves held depends on how closely assumptions adopted in the valuation represent the actual experience of the Company. If the actual experience of the Company turns out to be worse than that expected as per the valuation assumptions adopted, the reserves held will prove to be insufficient

There were three key assumptions on which computed reserves were based:

- Interest Rate Assumptions
- Expense Assumptions
- Mortality Assumptions

The assumed valuation rate of return was 10.8% for assurances and annuities. The interest rate was estimated using Mutual Benefits Life's expected investment income on life funds, which is 11% less a 0.25 basis point margin for reinvestment and credit risk.

Mortality assumptions for individual life assurances were based on SA 1956-62 ultimate mortality tables published on behalf of the Actuarial Society of South Africa (ASSA). For the valuation of annuitants' mortality, assumptions were based on SA 1985-90 ultimate mortality tables. The Company has not undertaken a mortality investigation analysis over the year to assess the suitability of the mortality assumptions. However, given that the volume of insurance risk business is relatively small, the volume of data available will not be sufficient to provide credible mortality rates for the Company to adopt. Overall, actual mortality rates should still be monitored relative to the expected rates as per the reserves held.

We tested the sensitivity of the reserves to various changes in the assumptions adopted and below are the results of the analysis:

Assumptions	Change in Assumption	Increase/(Decrease) in Liability ** '000
Mortality	10%	79,796
Longevity	10%	(5,120)
Lapse and Surrender	10%	(17,659)
Discount rate	1%	(152,599)
Mortality	-10%	(75,911)
Longevity	-10%	5,354
Lapse and Surrender	-10%	18,650
Discount rate	-1%	172,218

From the analysis above, the Company's insurance liabilities will reduce by $\frac{1}{2}$ 75.9 million if mortality decreases by 10%. The profitability of term assurance products is especially sensitive to changes in mortality rates. Management should consider incorporating appropriate risk margins on mortality assumptions used in pricing and reserving.

The value placed on liabilities is also significantly affected by the rate of return used. This is especially critical for annuities, the profitability of which depends on the investment return earned on assets backing the liabilities.

The results revealed that reserves decrease with an increase in lapses. This is true for term assurances as the policies lapse without value. For the anticipated endowments, however, the impact of lapses depends on the policy's duration in force as well as the value of the surrender benefits payable relative to the reserve.

We recommend that the Company undertakes experience analysis investigations in order to assess the appropriateness of the valuation assumptions adopted and hence the sufficiency of the reserves held. Experience should be continuously monitored in order to effectively manage insurance and investment risks.

To assess the adequacy of Group Life reserves, past claims should be analysed against reserves held. We recommend that the Company maintains proper records of claims data including claim amounts, dates of deaths, and reporting dates. The data will be used in carrying out IBNR and UPR sufficiency analyses.

Overall, we are confident that the reserves computed are adequate. We, however, recommend that the Company undertakes a detailed analysis of surplus exercise to assess the extent of the deviation of the actual experience from that assumed and to also make adequate provision including sufficient liquidity for partial maturity payments expected under the Anticipated Endowment product. This is especially crucial given that in 2021 majority of the policies underwritten in 2017 will be in their fourth year and therefore due to receive the first partial maturity payments.

4.3. Solvency

The statutory solvency position of the Company over the past two years is summarised below:

Published assets	31-Dec-21	31-Dec-20
Tublisticu assets	000' 14	900' H
Total admissible assets from balance sheet	52,000,660	50,793,484
Less: Gross policyholder liabilities	41,900,805	37,319,223
Less: Current liabilities	1,930,005	2,000,384
Excess of assets over liabilities	8,169,850	11,473,877
Required Solvency Margin (max (N 2b, 15% net premiums)	2,000,000	2,000,000
Solvency Ratio	4.08	5.74

From the above, the solvency status of the Company reflects a surplus of \$8.2 billion. This follows from the inadmissible assets held by the Company comprising, Deferred tax assets of \$342 million, other receivables balance of \$893 million, investment in foreign equities of \$722 million and deposit for equity shares in Mutual Microfinance Bank limited of \$100 million.

The statutory basis also deducts from the current liabilities as the current liabilities decreases to \$1.9 billion from the prior year of \$2.0 billion.

We understand that the Company was permitted by the regulator (National Insurance Commission "NAICOM") to hold as an admissible asset, its loan to Prime Exploration and Production Limited a year to July 2021.

The table below summarises the valuation results including the solvency status on a statutory basis:

Published assets	31-Dec-21	31-Dec-20
Published assets	000' #	000' 4
Total assets from balance sheet	54,057,696	52,482,637
Less: Gross policyholder liabilities	41,900,805	37,319,223
Less: Current liabilities	1,930,005	2,000,384
Excess of assets over liabilities	10,226,886	13,163,030
Required Solvency Margin (max (N 2b, 15% net premiums)	2,000,000	2,000,000
Solvency Ratio	5.11	6.58

From the table above, the excess of assets over liabilities more than exceeded the required solvency margin of $\frac{1}{2}$ billion up to 5.11 times. This implies that the Company is sufficiently capitalised. There is however a regulatory risk to which the Company is exposed relating to the admissibility of assets held in demonstrating solvency. We note that the restructured loan to Prime Exploration and Production Limited now expires in 2025.

5. Premium adequacy

5.1 Premium Adequacy

The table below indicates key financial ratios for Mutual Benefits for the financial year ended 31 December 2021. The corresponding statistics from the previous year have been included for comparative purposes.

Ratios	31 December 2021	31 December 2020
Net Claims Ratio	60.2%	49.8%
Management Expense Ratio	25.8%	28.9%
Net Combined Ratio	86.1%	78.7%
Investment return	-	15.3%

The above statistics indicate that the overall mix of exposure for the Company results in a profit (combined ratio less than 100%). However, there was an investment loss resulting from fair value losses.

To effectively assess the premium adequacy of Mutual Benefits, a profit test analysis of the business in force has to be carried out. The exercise involves projecting to maturity future cash flows in respect to the business in force based on the actual expected experience. The cash flows include all contractual outgo and income as well as the increase in statutory reserves for every period of projection. As the reserves held include risk margins, we expect that the margins are released as profits through the term of the policy. The discounted profits are then expressed as a proportion of the present value of future expected premiums to arrive at a profit margin of the business.

A positive profit margin indicates that the premiums are sufficient to cater for expenses and claims. The profit test exercise may be extended to assess the profitability of all policies in force as well expected new business in an appraisal value calculation. This would serve as a granular check on the profitability of each type of product sold by the company, together with the actual drivers of the same.

An explicit analysis of surplus would further determine the parameters that are contributing to the profits, e.g. lapses being lower than expected could release profits.

6. Asset and Liability Management

6.1. Assets

6.1.1. Asset classes

The table below shows the composition of the Company's assets between the various asset classes as at 31 December 2021. Corresponding statistics for the previous financial year are shown for comparative purposes.

	31 December		31 December	
Asset Class N'000	2021	%	2020	%
Fixed interest	36,286,595	67%	38,764,868	74%
Property	6,035,000	11%	6,665,000	13%
Equity	413,393	1%	139,117	0.3%
Cash deposits	6,923,714	13%	2,880,279	5%
Statutory Deposit	200,000	0%	200,000	0.4%
Invested assets	49,858,702	92%	48,649,264	92%
Reinsurance recoveries	1,426,918	3%	1,702,233	3%
Other balance sheet assets	2,772,076	5%	2,131,140	4%
Total Assets	54,057,696	100%	52,642,638	100%
Insurance and Investment Liabilities	(41,900,805)		(37,319,223)	
Current Liabilities	(1,930,005)		(2,160,382)	
Net Assets	10,226,886		13,163,030	

6.1.2. Valuation of Assets

For the purposes of this FCR, the assets have been taken into account at 100% of fair (or market) value. The value of assets as at 31 December 2021 was \$\frac{\text{\text{W}}}{2}\$.

6.2. Liabilities

The Company underwrites life insurance products for the individual and business markets. Please see Section 3.2 for further details.

The life assurance liabilities held by the Company are primarily long-term and are all denominated in Naira.

The Company has a significant book of long-term investment individual life policies whose sums assured comprise the full amount of policyholder contributions accumulated with accrued interest standing to the credit of the policyholder. Investment contract actuarial liabilities made up 66% of the total liabilities held.

Insurance risk liabilities form the remaining 34% of the Company's liabilities, which mainly comprise short term group life insurance liabilities. The proportion of long-term insurance liabilities relative to the Company's total liabilities is 4.2%. Long-term liabilities constitute actuarial reserves of annuities and assurances, a large proportion of which are guaranteed in monetary terms. A small portion of the long-term liabilities includes discretionary liabilities in respect to reversionary bonuses declared under the individual life anticipated endowment assurance.

6.3. Asset Liability Matching

The currency, nature, and term of the liabilities impact the assets that the Company should be investing in to reduce the risk of a mismatch between assets and liabilities.

Given that the Company's liabilities are primarily investment linked with investment guarantees, management should adopt an investment strategy that provides a stable return that meets the minimum guarantee. 67% of the Company's invested assets comprises fixed interest securities.

The Company also has as part of its assets, equity, and property that make up 12% of invested assets. Investment income from the two asset classes is characterised by high volatility and cannot be relied upon to always meet investment guarantees. However, Equity and Property provide real returns which are expected to increase in the long term. The assets, therefore, serve to provide higher returns compared to fixed interest securities that will allow the Company to make competitive interest additions to funds under administration and better claims experience being better than the benefits assumed.

Cash deposits that make up the remaining proportion of 13% of assets may not be sufficient to provide liquidity to match the short-term pay-outs expected due to claims and expenses.

An overall view of the balance sheet of Mutual Benefits shows that the company's assets give an acceptable level of matching to the expected liabilities.

7. Reinsurance Arrangements

7.1. Reinsurance Strategy

The following sections are summarised from the Mutual Benefits Life Assurance Limited Reassurance Management Strategy.

7.1.1. <u>Current Reinsurance Arrangements</u>

- The retention is limited to a maximum of N25 million on individual life and also Group Life
 Policies
- The non-medical limit on Individual life is ₩40 million and Group Life is ₩30 million
- The treaty capacity per individual Life Assured is \(\frac{4}{600}\) million

No changes have been made to the reinsurance arrangement from 2020.

In terms of management of Liquidity, Mutual Benefits Life is readily available to meet all obligations pending recovery from reinsurer.

7.2. Reinsurance Impact

The impact of reinsurance has been assessed by the difference between the gross and net loss ratios. A positive difference indicates reinsurance savings while a negative difference indicates that reinsurance arrangements in place may not be optimal. Between the years 2020 and 2021. In 2020, the reinsurance impact was 7.2% and this reduced to -2.5% in 2021 indicating a negative impact.

The table overleaf provides the analysis for the year ending 31 December 2021 and the previous year.

	31 December 2021	31 December 2020
Gross Written Premium	11,617,005	8,433,063
Gross Earned Premium	10,079,103	8,525,403
Reinsurance Premium	(703,624)	(947,345)
Net Premium	9,375,479	7,578,058
Gross incurred Claims	5,598,661	4,592,283
Reinsurance Recoveries	(847,519)	(1,014,503)
Net incurred Claims	4,751,142	3,577,780
Commission's income	68,683	179,529
Gross Loss Ratio A	48%	54%
Net Loss Ratio B	51%	47%
Reinsurance Impact (A-B)	-2.5%	7.2%
Commission's income Ratio	0.7%	2.4%

The above statistics indicate that overall, the reinsurance arrangements do not seem to be satisfactory. This is due to the reinsurance net loss ratios being higher than the gross loss ratios. however, the impact across the years has improved and this is commendable. We recommend that management continue to monitor and optimise its reinsurance arrangements to gain maximum benefits.

8. Risk Management

8.1. Risk Management Strategy

Mutual Benefits has adopted a formal Enterprise Risk Management Framework. We have summarised below the key points from the strategy:

- Empower all staff to proactively identify, control, monitor, and regularly report risk issues to management.
- Strengthen the risk management framework to fully support the strategic business units and the overall business strategy. The strategy is to develop an integrated approach to risk assessments, measurement, monitoring, and control that captures all risks in every area of the business activities.
- Drive overall corporate objective with emphasis on protecting the organization from risks while increasing its market share.
- Ensure the existence and appropriate implementation of a risk management process that is well articulated to identify, assess, measure, monitor and control all the identified risks elements.
- Develop detailed policies and guidelines to guide the management of claims risks, operational risks, market risks, investment risks, liquidity risks, and other identified risk types.

8.2. Material risks

The following summarises the key risks faced by Mutual Benefits, as well as their impact and implications, based on our reviews as the Appointed Actuary:

8.2.1 Insurance Risk

Mutual Benefits is exposed to the following elements of insurance risk, with varying levels of exposure.

- Mortality Risk The Company is exposed to the risk of actual mortality rates being higher than the assumed rates in the pricing of products. This would represent higher death pay-outs than expected.
- Longevity Risk The Company has an annuity book that is exposed to the risk of the annuitants living longer than expected as per the pricing basis of the annuities, representing higher pay-outs than expected.
- Expense Risk The Company is exposed to the risk of the actual expenses incurred exceeding the assumed expenses in the valuation of the liabilities. This is especially crucial given that the expense (excluding commissions) ratio as at 31 December 2021 was 26.5%. The assumed renewal expenses per policy basis for next year might increase the actuarial liabilities due to future expenses incurred.

8.2.2 Investment Risk

The Company's product offering includes policies with significant guaranteed rates of return. This exposes the Company to the risk that the actual investment return achieved is insufficient to meet guaranteed interest rates – Investment returns risk.

8.2.3 Reinsurance Optimisation

Our high-level analysis of the reinsurance strategy in place revealed that the overall reinsurance arrangements may not be optimal due to the reinsurance net loss ratios being higher than the gross loss ratios.

8.3. Recommendations

8.3.1 Insurance Risk

We recommend that the Company undertakes experience analysis investigations to assess the appropriateness of the valuation assumptions adopted and hence the sufficiency of the reserves held. Experience should be continuously monitored to effectively manage insurance and investment risks.

Management should continue to monitor the claims volatility and their business volumes to minimise the probability of one-off losses wiping out the company's profits. This should be done by ensuring that the company is adequately protected by its reinsurance arrangements. Management may also consider introducing a catastrophe reserve and/or claims equalisation reserve to combat the risk.

It is worth noting that proper data management is key in facilitating the investigations mentioned above. The company should aim at collecting and maintaining accurate data records. In growing the ordinary individual life business, it is important that policyholder movements can be reconciled from year to year to properly assess the profitability of new businesses.

8.3.2 <u>Investment Risk</u>

Management should consider setting up bonus stabilisation and cost of guarantee reserves to manage investment risk. A bonus stabilisation reserve will allow the company to smooth bonuses (interest additions) declared over time and manage policyholder expectations. An asset liability matching exercise should also be undertaken to reduce investment risks associated with mismatching assets and liabilities.

8.3.3 Reinsurance Optimisation

We recommend that the company carries out a reinsurance optimisation exercise so that they can benefit fully from their reinsurance arrangements especially with the current negative reinsurance impact.

Conclusion

I, Nikhil Dodhia, acting in my capacity as the Appointed Actuary, certify that, as at 31 December 2021, this Financial Condition Report for Mutual Benefits Life Assurance Limited has been prepared in accordance with the guidelines issued by the National Insurance Commission ("NAICOM") and generally acceptable actuarial principles.

- Malluldun

Nikhil Dodhia Mutual Benefits Life Assurance Limited Appointed Actuary

FRC No: FRC/2021/004/00000024023

Appendix 1: Data Reconciliation

The following data was received from Mutual Benefits in order to complete the FCR:

- Audited financial statements as at 31 December 2021 for the 2021 financial year.
- Audited financial statements as at 31 December 2020 for the 2020 financial year.
- Actuarial valuation of the Life Fund report as at 31 December 2021 prepared by Zamara
- Various documents relating to company governance structure and business plans for Mutual Benefits, including:
 - Mutual Benefits Assurance Life Limited's Reassurance Management Strategy
 - Mutual Benefits Investment Strategy
 - o Mutual Benefits Assurance Company's Strategic Plan
 - o Mutual Benefits Enterprise Risk Management (ERM) Framework
 - Mutual Benefits Shareholder Summary and Company Organogram

It was assumed that the data provided by the Company was correct, and a full audit of the data provided was not conducted.
